Key Benefits:
• Improves joint mobility*
• Supports growth of healthy cells*

What is it?
MSM (Methyl sulfonyl methane - organic sulfur) with Microhydrin® is the most technologically advanced MSM product available. Complete with vitamin C and the revolutionary antioxidant, Microhydrin, this product is the ideal way to add organic sulfur back into your diet.*

What is it formulated to do?
MSM provides the sulfur necessary for making collagen, which is the primary constituent of cartilage and connective tissue in the joints. Many people experience a reduction in joint discomfort when they supplement with MSM.*

Who may benefit?
Anyone with joint stiffness can benefit from MSM.

How is it used?
2 capsules are taken once or twice a day with meals.

What is MSM?
MSM is one of the vital raw materials that helps the body build healthy collagen, skin and connective tissue in our joints. Supplementing with MSM can improve the mobility of joints and reduce discomfort.

MSM is widely deficient in today's diet due to modern eating habits. Supplementing with MSM with Microhydrin is the perfect way to meet your dietary sulfur needs. We have combined MSM with vitamin C for their synergy.

MSM stands for methylsulfonylmethane, but for many people it simply spells relief. MSM is a biologically active form of the essential mineral sulfur, which is critical to the normal function and structure of the body.* The body utilizes sulfur to build protein and connective tissue, to make the enzymes necessary for chemical reactions and to protect us from oxidative stress.

Sulfur is naturally found in our food supply. However, poor diet, soil depletion and overcooking have all led to a common deficiency of this valuable mineral. The sulfur that still exists in our foods must be enzymatically converted into MSM, which is the form that our bodies can utilize. MSM with Microhydrin is the ideal way to add organic sulfur to your diet and achieve the amazing benefits of this nutrient.

Science-Backed Health and Wellness Solutions
True to our heritage, we provide solutions that advance and sustain natural health and wellness. RBC Life has 25 years of research experience. We combine the best of nature with rigorous science to develop innovative products with effective results. At RBC Life, we pride ourselves on delivering solutions in the context of Personalized Nutrition.

Item #1600 - 120 Vegetable caps
Collagen and your joints
Organic sulfur is an often-overlooked nutrient, but it has many important roles in the body. One of these roles is the production of collagen, which is the primary constituent of cartilage and connective tissue in the joints. MSM is a natural, organic form of sulfur that can be easily absorbed and utilized by the body. The body must have an abundant supply of useable sulfur in order to build healthy cells. This essential mineral is found in every cell of the human body.

Without the proper raw materials, our ability to repair and replace damaged tissues is compromised. MSM is one of these vital raw materials. Sulfur works to hold connective tissue together. It provides important cross-linking bridges in protein molecules, healthy collagen, skin protein and connective tissue in the joints. Supplementing with MSM has been shown to improve the mobility of the joints and reduce joint discomfort. It has also been found to reduce uncomfortable muscle spasms. Athletes can benefit by taking MSM prior to physical activity.*

Msm and your skin
MSM has been shown to encourage the repair of damaged skin. Our body is creating new skin cells every day. When sulfur is adequately available, the new skin appears softer and smoother. The new skin cells are also more permeable, allowing toxins to be eliminated through the sweat glands, which relieves the liver and kidneys from their heavy workload. MSM has also demonstrated the ability to soften scar tissue. Thicker hair and stronger nails are also common benefits of supplementing with MSM.*
